

GLADIUS

Catena vinciens libertatem, aequalitatem, humanitatem

"The chain that binds liberty, equality, and humanity"

Markets are powerful. They are also indifferent.

Gladius exists to change that — one verified ethical commitment at a time.

WHAT IT IS

Gladius is a blockchain token (\$GLAD) that acts as a civic signal. Holding \$GLAD is a public declaration that you stand behind the Universal Declaration of Human Rights.

HOW IT WORKS

Entities apply for Civitas status and receive a Dignitas score — an AI-verified, five-category ethical profile updated continuously from public data, with full human oversight.

WHY IT MATTERS

For the first time, capital can flow toward entities demonstrably committed to democratic values, fair labor, clean energy, and human dignity — transparently and at scale.

The Lex Gladii — Five Ethical Categories

Democracy	Art. 19, 21, 26, 27	Expression, democratic institutions, independent education & culture
Labor	Art. 20, 23	Freedom of association, fair wages, safe conditions, no forced labor
Environment	Art. 25	Clean energy, responsible use of shared natural resources
Rights	Art. 12, 17, 29, 18	Privacy, property, tolerance, freedom of & from religion
Finance	Art. 17	Transparent, fair, non-predatory financial practices

How Civitas Works

1

Apply

Any company, organization, or individual may apply for Civitas status.

2

Verify

AI assessment produces a continuous Dignitas score across five categories, with full audit trail.

3

Govern

The Council (7 elected members) provides human oversight. The Comitia (token holders) governs the protocol.

4

Signal

Civitas entities and \$GLAD holders signal their ethical commitment publicly and on-chain.

In 450 BC, Rome inscribed its laws on twelve bronze tablets and placed them in the Forum for all to see. Law became public. Justice became legible. Gladius does the same — inscribing ethical commitments on an immutable public ledger, governed by the many, visible to all.
