

Tokenomics

Companion Document — Draft I

Catena vinciens libertatem, aequalitatem, humanitatem
"The chain that binds liberty, equality, and humanity"

I DE PHILOSOPHIA

Tokenomics Philosophy

\$GLAD is not primarily a financial instrument. It is a civic signal — a public, on-chain declaration of alignment with the values of the Lex Gladii and the Universal Declaration of Human Rights. Its economic design reflects this: distribution favors community over founders, supply is fixed against dilution, and vesting schedules are structured to sustain long-term commitment rather than reward short-term speculation.

The tokenomics of Gladius are designed to answer one question above all others: does the economic structure of this token serve its stated mission? Every decision in this document has been made with that question as the primary test.

\$GLAD is not a bet on price. It is a bet on the possibility that capital, community, and conscience can move together.

II DE COPIA

Total Supply

The total supply of \$GLAD is fixed at **100,000,000 tokens** (100 million). This supply is immutable — encoded in the Algorand smart contract at launch and not subject to change by any governance decision, including a unanimous vote of the Comitia. It is the one parameter in the Gladius protocol that is truly and permanently beyond governance.

A fixed supply protects every holder from dilution. It signals that Gladius is not a mechanism for extracting value through inflation, but a finite civic resource whose value — if any — derives from the quality and growth of the community it represents.

Total Supply	100,000,000 \$GLAD
--------------	--------------------

Blockchain	Algorand (carbon-negative, pure proof-of-stake)
Token standard	Algorand Standard Asset (ASA)
Supply mechanism	Fixed — no minting, no burning, no inflation
Immutable parameters	Total supply — cannot be amended by any governance process

III DE DISTRIBUTIONE

Token Distribution

The distribution of \$GLAD is designed to place the majority of tokens in community hands from the outset. The largest single allocation — 40% — goes to community and ecosystem development. This is a deliberate signal that Gladius belongs to its community, not its founders.

Allocation	%	Amount (\$GLAD)	Purpose
Community & Ecosystem	40%	40,000,000	Civitas member rewards, community grants, ecosystem growth, Dignitas incentives
Foundation Reserve	20%	20,000,000	Long-term operations, development, contingency fund, released by governance vote over 5 years
Public Sale	15%	15,000,000	Initial fundraising — open, transparent, and accessible to any participant
Founding Team	15%	15,000,000	Core early contributors — tiered release over 24 months
Council & Quaestor	5%	5,000,000	Compensation for Council members and Quaestor — milestone-based over 24 months
Liquidity Pool	5%	5,000,000	Locked in Algorand DEX liquidity pools at launch to ensure \$GLAD can be traded from day one
Total	100 %	100,000,000	

Community & Ecosystem tokens are released gradually through grants, Civitas rewards, and governance-approved programs. They are never dumped onto the market in bulk.

IV DE MATURITATE

Vesting Schedules

Vesting schedules reflect two realities: the practical need for contributors to sustain themselves while building Gladius, and the importance of demonstrating long-term commitment to the community. The schedules below are designed to balance both — providing meaningful early access while retaining a credible long-term signal.

Founding Team — 15,000,000 \$GLAD

The founding team vesting is structured as a tiered release over 24 months. An immediate release at launch provides the means to sustain the work from day one, while the remaining tranches are released quarterly, reflecting ongoing contribution and commitment.

Milestone	Release	Tokens Released	Cumulative
Launch day	10%	1,500,000	10%
Month 3	10%	1,500,000	20%
Month 6	15%	2,250,000	35%
Month 9	15%	2,250,000	50%
Month 12	15%	2,250,000	65%
Month 18	17.5%	2,625,000	82.5%
Month 24	17.5%	2,625,000	100%

Council & Quaestor — 5,000,000 \$GLAD

Council member vesting is milestone-based rather than purely time-based, reflecting the operational nature of the role. Each tranche is linked to a meaningful stage in the development of Gladius governance. The Quaestor receives an extended final tranche at month 36, reflecting their longer mandate and ongoing financial stewardship.

Milestone	Release	Description
On appointment	20%	Immediate — onboarding and initial time investment recognised
Month 3	20%	Council is operational — first decisions and reviews completed
Month 6	20%	Dignitas system is live and operational
Month 12	20%	First annual Lex Gladii review completed
Month 24	20%	Full governance cycle complete — Comitia, Dignitas, disciplinary processes all demonstrated
Month 36 (Quaestor only)	Bonus 10%	Extended stewardship recognition — subject to Comitia renewal of the Quaestor mandate

Foundation Reserve — 20,000,000 \$GLAD

The Foundation Reserve is released through governance-approved proposals over a five-year period. No single release may exceed 20% of the reserve (4,000,000 \$GLAD) without a supermajority Comitia vote. This ensures the reserve is deployed deliberately and transparently, never as a lump sum.

Public Sale, Community & Liquidity Pool

Allocation	Release	Notes
Public Sale	Immediately liquid	No lockup. Open to all participants at launch.
Community & Ecosystem	Ongoing — governance-approved	Released via Civitas rewards, grants, and community programs. Never bulk-released.
Liquidity Pool	Locked at launch	Locked in Algorand DEX pools. Unlocking requires supermajority Comitia vote.

V DE USU

Token Utility

\$GLAD has four distinct utilities within the Gladius ecosystem. These are not speculative use cases — each is operational from launch or tied to a specific, defined milestone.

Utility	Description	Available
Governance	\$GLAD holders participate in the Comitia — proposing and voting on amendments to the Lex Gladii, Council elections, treasury allocation, and protocol updates	From launch
Civic signal	Holding \$GLAD is a public, on-chain declaration of alignment with the UDHR and the Lex Gladii — recognised by Civitas entities and the broader community	From launch
Ecosystem access	\$GLAD holders access preferential DeFi pools composed exclusively of Civitas-certified entities, with access tiers linked to Potestas level	Phase 2 — post Dignitas MVP
Medium of exchange	\$GLAD serves as the medium of exchange within the Gladius ecosystem — fees, grants, and Civitas-related transactions are denominated in \$GLAD	From launch

VI DE COMITIA

Governance Thresholds

The Comitia operates on a two-tier proposal system designed to balance accessibility with the seriousness of binding decisions. Any genuine community member can initiate a discussion. Binding decisions require

demonstrated stake. Amendments to the foundational Lex Gladii require the highest threshold of all, protecting the constitutional core of Gladius.

Action	Threshold	Rationale
Submit a discussion proposal	1,000 \$GLAD	Accessible to any genuine community member. Filters noise without creating barriers to participation.
Submit a binding governance vote	10,000 \$GLAD	Requires meaningful stake in the community. Ensures binding decisions reflect considered commitment.
Amend the Lex Gladii	50,000 \$GLAD + Council approval	The highest threshold. Protects the constitutional foundation of Gladius from erosion by simple majority or low-participation votes.
Release Foundation Reserve tranche	10,000 \$GLAD + supermajority	Ensures treasury deployment is deliberate, transparent, and broadly supported.
Unlock Liquidity Pool	50,000 \$GLAD + supermajority + Council approval	Maximum protection for the liquidity foundation of the ecosystem.

Supermajority is defined as 67% or more of votes cast, with a minimum quorum of 10% of circulating supply participating. Both conditions must be met for a supermajority decision to be valid.

VII DE BENEFICIIS

Ecosystem Benefits by Potestas Level

As established in the Dignitas Methodology, ecosystem benefits available to Civitas entities scale inversely with their Potestas level. The following table defines what each level of Civitas entity can access within the \$GLAD ecosystem.

Potestas Level	Civitas Signal	Governance	DeFi Pool Access	Enhanced Benefits
Standard	Yes	Full	Full access	Yes — above 85 Dignitas overall
Elevated	Yes	Full	Full access	No
High	Yes	Full	Partial — restricted pools	No
Critical	Yes	Full	Signal recognition only	No

Anti-Concentration Measures

Gladius is committed to preventing the capture of its governance by any single large holder. The following measures are encoded in the protocol from launch and can only be amended through a supermajority Comitia vote with Council approval.

Measure	Rule
Voting cap	No single address may exercise more than 5% of total voting power in any Comitia vote, regardless of holdings.
Proposal cap	No single address may submit more than 3 binding governance proposals in any 90-day period.
Council independence	No Comitia vote may directly instruct a Council member on a specific Dignitas decision. Council independence in individual assessments is absolute.
Founding team voting	Founding team tokens carry no voting rights for the first 12 months post-launch, regardless of vesting.

A governance system that can be bought is not governance — it is an auction. These measures ensure that Gladius remains answerable to its community.

Launch Roadmap

The following roadmap outlines the key milestones from token launch to a fully operational Gladius ecosystem. It is indicative rather than binding — the community, through the Comitia, may adjust priorities as circumstances evolve.

Phase	Milestone	Key Deliverables
Phase 1 — Genesis	Launch	\$GLAD token deployed on Algorand. Public sale. Founding team and Council appointed. Comitia governance active. First Civitas applications open.
Phase 2 — Dignitas MVP	Month 3–6	First Dignitas scores published. AI assessment layer operational. Council conducting first reviews. Disciplinary process tested.

Phase	Milestone	Key Deliverables
Phase 3 — Ecosystem	Month 6–12	Preferential DeFi pools live. Community grant program active. First Lex Gladii annual review. Dignitas scoring fully automated.
Phase 4 — Maturity	Month 12–24	Full governance cycle demonstrated. Potestas classifications published for major entities. Foundation Reserve first deployment. Community self-sustaining.
